## 14 Convert Celsius into fahrenheit

```
#include <stdio.h>

int main() {

    int celsius, fahrenheit;

    printf("120");

    scanf("%d", &celsius);

    fahrenheit = (celsius * 9.0 / 5.0) + 32 ;

    printf("fahrenheit = %d\n",fahrenheit);

    return 0;

}
```

A screenshot of a code execution output window. The window has a title bar with 'Output' and a 'Clear' button. The output text shows the calculation '120120\* 9.0 / 5.0) +32=' followed by 'fahrenheit = 248'. Below this, it says '=== Code Execution Successful ==='.

```
Output Clear
120120* 9.0 / 5.0) +32=
fahrenheit = 248

=== Code Execution Successful ===
```
